NSD and its clients are business partners

We offer client specific development based on his business requirements and Continuous improvement to our best practices solutions. Our new concept to our clients is "The best solution that can help you to create maximum value for your company may not be exactly the same solution that works for another company. We want to help you to optimize your business process and maximize the value returned by your NSD ERP solution";

Thus, deeply concerned by the total success to the implementation of its products, long time ago, NSD took a strategic decision which is, implementing its ERP System (NSD ERP) - Do not accord the implementation of NSD ERP to third part, whoever it is - then accompany and become business partner with its clients, consequently, our work is not limited to deliver our NSD System – License use to our client;

- **Our role is not limited to the sales of our products or services.**
- **Our culture and our professional ethic mean that, we respect our clients' specificity, and confidentiality, we have to be close to our customers, wherever they are.**
- **Our technical support starts from the moment where our collaboration starts.**
- **Our mutual success is based on our intelligent and close collaboration with client project's team.**

In order to achieve its goal on terms of system delivery, implementation and support, NSD trains and transfer knowledge to its client

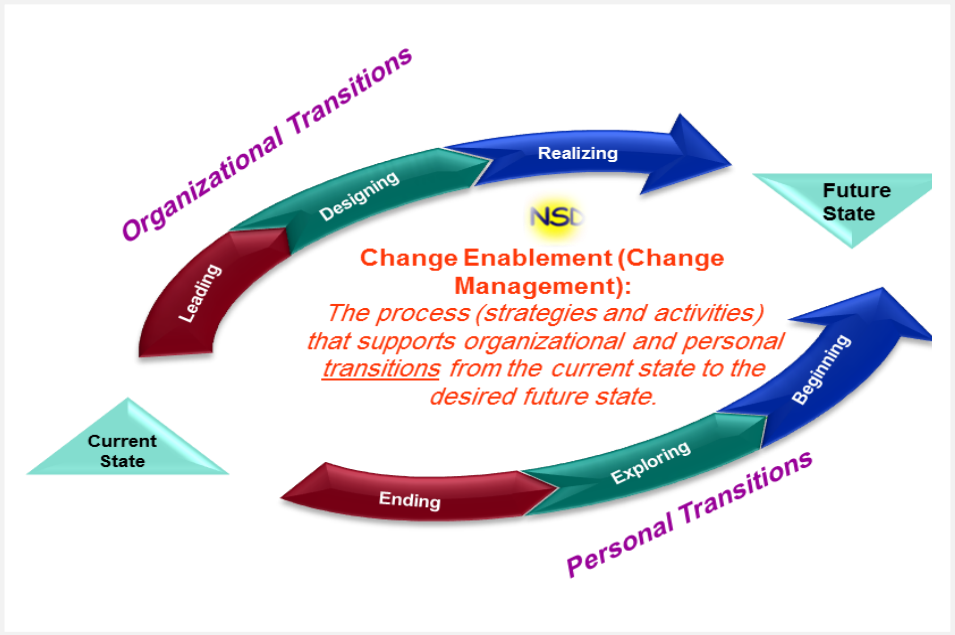
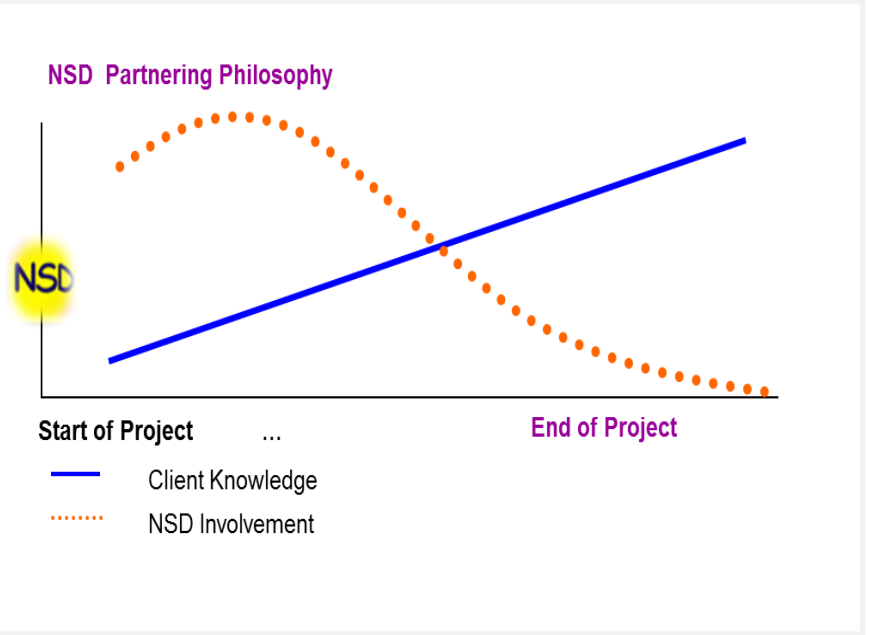
We believe that Change Enablement is a critical success factor of any large project. As our framework below depicts, we believe any change initiative involves a transition at both the organization-wide and individual (i.e., Employees) levels. To make the transitions as smooth and lasting as possible, we will incorporate the following Best Practices into our project approach.

NSD Understands the Change Process and transfer knowledge





Main performed tasks to ensure the close collaboration and knowledge transfer:

- Balanced transfer of technology, process, and change enablement knowledge.
- Process and system training.
- Shared ownership of all project tasks and deliverables.

Systems' Introduction

NSD presents to its clients two integrated solutions:

- **NSD ERP Systems (Enterprise Resources Planning), also called Integrated Management Software (ERP) or Government Resources Planning, it is built on Oracle's platform and using Oracle as Data Base.**
- **NSD BCS which is an applications system (ERP), it is built on Microsoft's platform (.net) and using MS SQLSERVER as Data Base.**

NSD has successfully answered and reduced the number of worries of its ERP clients, by a long terms of close collaboration and especially, by providing an integrated solution including:

- Infrastructure (Networks and Hardware) audit and realization
- System delivery
- System Implementation
- Training
- Support
- Data Migration
- Business Process Management, Enhancement and Audit
- Policies and Procedures
- Organizational Structuring / Restructuring

In addition to the above NSD ERP systems, NSD offers to its clients more software, the below software are excellent products developed and designed for best use of your business process.

NSD POS	Point Of Sale System
NSD RMS	Restaurant Management System
NSD CMS	Clinic Management System
NSD BBS	Beauty Business System
NSD CMS	Car Management System
NSD VDS	Vehicle Management System (Sales & Distribution)

All modules of NSD ERP systems, are a standalone application, which means that, NSD offers to its clients different systems:

- Human Resources Management System
- Accounting and Financial System
- Warehousing Management system
- Inventory Management System
- Project Management System
- Production Management System
- Logistics – Materials Management System

NSD ERP System

Integrated Applications

NSD ERP System includes the following applications and functionalities:

Financial (Accounting)
Human Resources (Personnel Administration, Time Management, Payroll, Recruitment, Organization Management……)
Logistics (Materials Management, Warehousing, Procurement, Purchasing, Inventory……)
Sales and Distribution

© NSD (Networks Systems Development), all rights reserved - NSD ERP®

Project Management (PS)
Students Management System
Vehicles Management System…etc.

NSD ERP is an Integrated System.

The individual applications in the NSD ERP System are fully integrated. All data that are used across applications are stored at client level (the client is the highest hierarchical level in the NSD System). Specifications that you make or data that you enter at this level are valid for all company codes and for all other organizational structures. Consequently, you do not have to enter these specifications or data more than once. Central maintenance ensures standardized data.

Students, Employees, Customers and vendors master records, for example, are stored centrally and used in the applications Financial Accounting (FI), Sales and Distribution (SD) and Materials Management (MM)…..

Also, the individual applications exchange data so that business transactions do not need to be entered more than once. For example, invoices that are posted in SD are passed on to FI, and data that is entered in FI is passed on to other applications. If you use Cost Center Accounting, for example, you can specify a cost center directly when you enter a document, to which the amount entered in the line item, is to be posted.
